Our Story

When we started Farmer's Buddy in 2020, we wanted to grow more than just fresh and nutritious food. We wanted to create a sustainable future for farming and feed the world in a way that is good for both people and planet.By creating hyper-local urban farms we are creating a complete transparent supply chain with low-carbon footprint and our growing technique helps us save 95% water yet grow 30x compared to traditional farms

Feeding the world in a sustainable way !

We're uniquely leveraging tech , to economically empower people and monetize their passions , talents and spaces.We're on a mission to ignite agri-entreprenuers , leading to a positive change both for the people and planet.

GET IN TOUCH

Why Farmer's Buddy ?

The problems in the prevailing agronomics is concerning. Wide-spread draught, pest ridden crop failures and a strained demand market flush with produce laced with pesticides amidst challenging growing conditions. Soil in the farmlands is degrading due to indiscriminative use of fertilizers, pesticides and carless discharge of polluted industrial effluents and municipal sewerage waters into the irrigation canals and finally to the fertile farmlands. Farmers – who have been the backbone of the Indian economy are in severe distress and are running short on both resources and technological innovation.

How are we helping?

At Farmer's Buddy, it's David versus Goliath everyday where we research towards creating robust and reliable agri-tech that is aimed at empowering even a medium and marginal farmer deploy our tech in in their farms at ease and with little financial burden. We are determined to help a growing number of farmers by not only using the best technologies, but also help them in channelling their quality produce through our brand.

Our Research & Development

Our scientists work with our farmers educating and upskilling them on the ground to make the best use of progressive farming practices like hydroponics, soilless farming and vertical farming. From helping them identify seed varieties, proper seeding techniques, to plant nutrient formulations and how to bring about the best yield in controlled environment growing. We introduce them to the concepts of sustainable farming methods where the typical water consumption is 95% less than traditional soil farming, and harnessing the power of solar to run the farms that minimise our carbon footprint at every level, and not to forget the employment opportunity that each and every acre of our farms generate for farmer families across India.
